The light chain segment comprises the c-terminal 85 amino acids of B domain and the A3 domains segment comprises the C-terminal 85 amino acids of B domain and the A3 into the same plasmid seperated by 42 nucleotides coding for 14 residues control sequences, that directs the transcription and translation of the B domain, that is deleted. This plasmid is operably linked to factor VIII gene. The adeno-associated viral vectors are used for gene therappy, because of their broad host range, safety profile and duration of the thorapy, because of their broad host range, safety profile and duration

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present DNA sequence is a recombinant adenovirus-associated vector, (rAAV) construct, pAAV-F8-1. This expression vector comprises the HNF-3 albumin promoter, the first intron (-573 to +985) of human elongation factor-lalpha (EF1alpha) gene, human Factor VIII coding sequence (hFVIII) and polyadenylation signal from human growth hormone (hGH). This sequence is inserted between the AAV inverted terminal repeat (ITR) regions. The

The present invention relates to a method for treating a subject suffering from a blood clotting disorder. The method comprises administering a recombinant adeno-associated virion (rAAV) comprisis a nucleotide sequence encoding the light chain of factor VIII and a second recombinant adeno-associated virion comprising a nucleotide sequence encoding the heavy chain of factor VIII. The rAAV vector i

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          useful in gene therapy for treating haemophilia A in mammals, in particular humans. The rAAV vector provides high level and long term expression of biologically active clotting factor VIII in vivo. The present sequence is pAAV-F8-1 vector without the plasmid backbone. It comprises HNF-3.mouse albumin promoter, a synthetic intron based on human elongation factor lalpha (EFlalpha) and immunoglobulin G (19G) intron sequences, B-domain deleted human factor VIII coding sequence, poly A signal based on rabbit beta-globin sequence and AAV inverted terminal repeats (ITRS) at the ends. The vector encodes both the light and heavy chains of human factor VIII.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 11933 BP; 3258 A; 2818 C; 2717 G; 3140 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DЬ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       B
              The present DNA sequence is a recombinant adenovirus-associated vector, (rAAV) construct pVm4.1cp8deltaB. This expression vector comprises the CC promoter, first intron (-573 to +995) of human elongation factor-lalpha CC promoter, first intron (-573 to +995) of human elongation factor-lalpha CC promoter first intron (-573 to +995) of human elongation factor-lalpha CC polyadenylation signal from human growth hormone (hGH). This sequence is CC promoter that AV inverted terminal repeat (ITR) regions. The CC promoter for the AAV inverted terminal repeat (ITR) regions. The CC promoter for the N-terminus of the Bomain. The light chain CC and 5 amino acids from the N-terminus of the Bomain. The light chain segment comprises the C-terminal 85 amino acids of B domain and the A3. CC segment comprises the C-terminal 85 amino acids of B domain and the A3. CC control sequences, that directs the transcription and translation of the CC control sequences, that directs the transcription and translation of the Factor VIII gene. The adeno-associated viral vectors are used for gene CC therapeutic levels of factor VIII in vivo. The rAAV are used for gene CC therapy, because of their broad host range, safety profile and duration CC of expression in the infected hosts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Recombinant Adeno Associated Vector; rAAV; pVm4.lcf8deltaB; promoter; human Factor VIII; hFVIII; EFlalpha; human elongation factor-lalpha; human growth hormone; hGH; ITR; inverted terminal repeat; haemophilia;

CC The present invention relates to a method for treating a subject CC suffering from a blood clotting disorder. The method comprises CC administering a recombinant adeno-associated virion (rAAV) comprising CC anuclectide sequence encoding the light chain of factor VIII and a CS sequence encoding the heavy chain of factor VIII. The rAAV vector is CC useful in gene therapy for treating haemophilia A in mammals, in CC particular humans. The rAAV vector provides high level and long term CC expression of biologically active clotting factor VIII in vivo. CC The present sequence is pVm4.1cF8-B vector without the plasmid Backbone. It comprises human elongation factor I (EFI) promoter, CC and AAV inverted terminal repeats (ITRs) at the ends. The vector CC and AAV inverted terminal repeats (ITRs) at the ends. The vector CC encodes both the light and heavy chains of human factor VIII coding sequence, poly A signal CC encodes both the light and heavy chains of human factor VIII
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAD08613
                                                                                                                                                                                                                                                                                                                                                                      Treating blood clotting disorder, especially hemophilia in mammals, by administering recombinant adeno-associated vectors which express blood coagulation factor {\tt VIII}
                                                                                                                                                                                                                                                                                                                                      Claim 19; Fig 6; 90pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WO200127303-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              vector. The vector comprises a heterologous nucleotide sequence encoding B-domain deleted factor VIII operably linked with at least one encoding B-domain deleted factor VIII operably linked with at least one encoding B-domain deleted factor. The method results in the production enhancer and at least one promoter. The method results in the production of high titer raAv vector stocks carrying the B-domain deleted factor VIII transgenes and expression cassettes, which generate adequate titers virus for in vivo administration. The recombinant vectors are useful of virus for in vivo administration. The recombinant vectors are useful for treating haemophilia A, where the liver expresses the encoded B-domain deleted factor VIII, which is secreted into the blood. They are also useful for the treatment of other coagulation disorders. The present sequence encodes a B-domain deleted factor VIII.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New recombinant adeno-associated virus vector, useful for treating haemophilia A, comprises heterologous nucleotide sequence encoding B-domain deleted human factor VIII operably linked with liver-preferred expression control element .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Walsh CE, Chao H, Burstein H,

           The invention relates to a method for expanding the population of endothelial cells (EC) obtained from peripheral blood, by culturing, endothelial cells obtained from peripheral mammalian blood in the presence of a culture medium from peripheral mammalian blood in the presence of a culture medium containing vascular endothelial growth factor (VEGF) and free of bovine brain extract. EC are useful for treating hemophilia by introducing it into the blood stream of a mammal, so that an effective amount of

Transgenic EC transduced in vitro are useful for improving prosthetic implants EC is also useful for diagnosing clotting disorders where indication or disease is associated with a reduction in the activity of an enzyme. EC is also associated with a reduction in the activity of diseases including useful in gene therapy for treating the variety of diseases including adenosine deaminase deficiency, sickle cell anemia, thalassemia, adenosine deaminase deficiency, sickle cell anemia, thalassemia, such as Alzheimer's disease, heart diseases, defects in immune system, such as Alzheimer's disease, heart diseases, defects in immune system, for repairing bone fractures and to treat or prevent osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 12445 BP; 3255 A; 2989 C; 2951 G; 3250 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC The invention describes novel genes and vectors exhibiting increased CC expression and novel splicing patterns. It provides a gene encoding a CC Factor VIII protein, that comprises one or more consensus or near CC consensus splice sites which have been corrected to increase expression. CC the expression of a gene, especially a Factor VIII gene. Genes containing CC levels and tissue-specific expression. The methods are used for CC introns, optimization and correction of consensus splice sites, addition of CC introns, optimization of 5' and 3' untranslated regions have optimized expression CC introns, optimization of 5' and 3' untranslated regions and increase in CC to treat a clinical disorder, to study RNA processing and/or gene CC regulation. The present sequence represents an uncorrected version of CC explaining deleted factor VIII protein encoding gene sequence (construct CC deleted factor VIII protein by correcting the consensus splice sites.

                                                                 The invention describes novel genes and vectors exhibiting increased expression and novel splicing patterns. It provides a gene encoding a factor VIII protein, that comprises one or more consensus or near consensus splice sites which have been corrected to increase expression. The method, DNA sequences and expression vectors can be used to increase modified 5' and/or 3' untranslated regions have optimized expression levels and tissue-specific expression. The methods are used for introns, optimized correction of consensus splice sites, addition of cytoplasmic RNA accumulation. Hence the DNAs are useful in gene therapy regulation. The present sequence represents the full length factor VIII protein encoding gene sequence from the first of the sequence represents the full length factor VIII protein encoding gene sequence from the contents and the contents and contents and contents and contents and contents and contents sequence represents the full length factor VIII protein encoding gene and contents and con

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The method, DNA sequences and expression vectors can be used to increase the expression of a gene, especially a Factor VIII gene. Genes containing modified 5' and/or 3' untranslated regions have optimized expression modified 5' and/or 3' untranslated regions have optimized expression. The methods are used for identification and correction of consensus splice sites, addition of introns, optimization of 5' and 3' untranslated regions and increase in introns, optimization of 5' and 3' untranslated regions and increase in the cytoplasmic RNA accumulation. Hence the DNAs are useful in gene therapy to treat a clinical disorder, to study RNA processing and/or gene regulation. The present sequence represents the gene comprising the regulation contains an intron spanning the portion of the gene encoding the better the contains an intron spanning the portion of the gene encoding the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     25-NOV-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes novel genes and vectors exhibiting increased expression and novel splicing patterns. It provides a gene encoding a factor VIII protein, that comprises one or more consensus or near consensus splice sites which have been corrected to increase expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 13; Page 89-100; 123pp; English.

This cDNA encodes the beta-domain deleted SQN deletion protein of human factor VIII. This is used in the construction of recombinant retroviral vectors expressing human factor VIII. The invention provides the preparation of replication defective recombinant retrovirus (RRV) expressing a therapeutic protein. The RRV preparation is resistant to degradation by human complement and is capable of inducing long term systemic expression of the therapeutic protein when administered intravenously to a human. The long term systemic expression results in a measurable level of the therapeutic protein being produced in the blood of the human for a period of at least 30 days after the administration o
                                                                                                                                                                                                                     New replication defective recombinant retro-viruses - which can be administered to provide long term systemic expression of therapeutic protein in blood, useful in, e.g. treating hyper-coagulable

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   the RRV vector preparation. RRV's can be used for in vivo delivery of therapeutic protein to treat, e.g. haemophilia A, haemophilia B, thrombosis, hypercoagulable disorders, liver diseases such as hepatitis, disorders such as thalassemia, phenylketonuria, Lesch-Nyhan syndrome, severe combined immunodeficiency (SCID), cystlc fibrosis, Duchenne's Muscular Dystrophy, inherited emphysema, familial hypercholesterolemia, Muscular hypopituitarism, adenine deaminase deficiency, alphalantitrypsin deficiency, Guacher's syndrome, anaemia, infections such as antitrypsin deficiency, Guacher's syndrome, anaemia, infections such as inflammatory disease or graft versus host disease. RRV's are capable of surviving inactivation in human serum thereby allowing efficient gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This DNA sequence includes a coding region for the B domain deletion mutant SQN (see AAW44372) of human Factor VIII. The SQN mutant is created by fusing Ser-743 to Gln-1638 of native Factor VIII (see AAW44373) to form a Ser-Gin-Asn (SQN) link between the A2 viii (see AAW44373) to form a Ser-Gin-Asn (SQN) link between the A2 and A3 Factor VIII domains. When compared to plasmid-derived and A3 Factor VIII domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New replication defective recombinant retroviruses - which express B domain-deleted human factor VIII or human factor IX for the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         De La
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Allen
                                                                                                                                                                                                                                                                                                                                                                                                               pharmacokinetics, but the reduced size of the molecule appears to pharmacokinetics, but the reduced size of the molecule appears to decrease proteolytic degradation. The invention relates to preparations of replication defective recombinant retrovirus (RV) preparations and desired human factor VIII protein, where the expressing a B domain-deleted human factor VIII protein, where the recombinant RV is capable of infecting human cells, is resistant to degradation by human complement and is capable of inducing to degradation by human complement and is capable of inducing long-term (at least 30 days and up to 6 months or longer long-term (at least 30 days and up to 6 months or longer post-injection) systemic expression of Factor VIII when administered to a haemophilia A patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 6; Page 174-175; 236pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The cDNA was prepd. from human liver RNA. Clone pCLB89 was produced by combining inserts from several positive clones isolated from the cDNA library. The sequence can be inserted into expression vectors for the prodn. of recombinant factor VIII. The protein produced is useful for treating blood clotting

                                                                                                    The isolation of Factor VIII mRNA from human liver, and the preparation, purification and identification of cDNA and its assembly in the plasmid purification and identification of cDNA and its assembly in the plasmid period to the control of the scalar preparation of plasmid period have been described in patent prollude deletion mutant proteins of Factor VIII polypetides of the invention region or "B domain" as well as a portion of the 92 kD region has been deleted. The polypetides have enhanced Factor VIII activity and/or deleted. The polypetides have enhanced factor VIII activity and/or decreased immunogenicity and can be used for the treatment of decreased immunogenicity and can be used to prepare antibodies. The Abs. Haemophilia A. They can also be used to prepare antibodies. The Abs. can be used to determine the concn. of Factor VIII in a body fluid. Sequence 8241 BP; 2625 A: 1759 C; 1703 G; 2154 T; 0 other;

 pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                      575

The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the normalized adult Ovary library. cDNA Library Preparation: M. Fatima Bonaldo, Ph.D. Clone distribution: clones will be available through Research Genetics This clone is also available through the I.M.A.G.E. Consortium at LDNL (info@image.lln1.gov).
